Israel Science and Technology Directory

Windows Locale Codes - Sortable list

NOTE: Code page is an outdated method for character encoding, yet it is still in use.
It is now preferable to use 16 bit character set of Unicode.

As defined by Microsoft, a locale is either a language or a language in combination with a country. See below for the definitions of locale and LCID and other resources.

CLICK one of the Column Titles to sort the table by that item.

Locale	Language code	LCID string	LCID Decimal	LCID Hexadecimal	Codepage
Afrikaans	af	af	1078	436	1252
Albanian	sq	sq	1052		1250
Amharic	am	am	1118		
Arabic - Algeria	ar	ar-dz	5121	1401	1256
Arabic - Bahrain	ar	ar-bh	15361		1256
Arabic - Egypt	ar	ar-eg	3073		1256

This table was generated from information at Microsoft Windows Encodings and Code Pages and additional resources listed below.

Definitions ^ Back to Page top ^

Locale: A collection of language-related, user-preference information represented as a list of values.

Locale ID (LCID): A 32-bit value defined by Microsoft Windows that consists of a language ID, sort ID, and reserved bits that identify a particular language.

Codepage: "An ordered set of characters in which a numeric index (code point values) is associated with each character. The first 128 characters of each codepage are functionally the same and include all characters needed to type English text. The upper 128 characters of OEM and ANSI codepages contain characters used in a language or group of languages (Taken from Related resources below)".
